Optimum Opti-Seal Paint Sealant

New Milford, NJ. - May 13, 2007, The new Optimum Opti-seal is a revolutionary way to protect a vehicles paint finish. This new paint sealant is the best available for many reasons. Its protection value is good for a minimum of 6 months. It will add to the gloss, shine and depth of the paint finish immediately. It bonds and cures to the paint in just minutes. And the best reason of all.....You wipe it on and walk away!!

There is no buffing, no mess, no wipe down, and no problems. We all know the difficulties in using various waxes and paint sealants. Some are very difficult to apply and even more are very difficult to remove. Have you ever had to literally "scrub" the wax or sealant off the vehicle? Have you ever put scratches back into the finish because of the need to "scrub" the product off the finish? Well no more!

The Opti-Seal will evaporate but leave long lasting protection and added shine behind. A mid size vehicle can be done in just minutes while the shine and protection will last for months. Less than an ounce of product is needed per vehicle. In fact, about 1 ounce of product will do about 4-5 vehicles. That's all you need. This reinforces the fact that less is better. A little goes a long way and makes your job much easier and faster. Simply spray it onto a foam applicator included in the kit, wipe it on and walk away. By the time the last panel is applied, the areas where you began will be fully protected with no added work or effort. For even more depth of shine, apply a second coat. Opti-seal can be applied over any of our Optimum products, or over any other wax or paint sealant. But after using this sealant, it will be the last sealant you will ever use.
